

LOCATION: ST-5-481

HYDRAULIC CONDITIONS: Apparent confined in saturated alluvium (Santa Fe Group)

PERTINENT OBSERVATIONS: Formation water produced while drilling from 439'-464'. Finished drilling to 515'. Measured water level in open borehole at 389.65' (G.S.) prior to well completion. Pre-development water level at 391.52 T.O.C. on 05/05/92 and post-development water level at 391.62' T.O.C. on 05/06/92.
